User opinions That's what people say about X-Organizer Music Organizer possibilities:"On our radio station, as on any other, is stored a large amount of music records. Some of them are played regularly, some of them not. To find needed music record in our audio archive, where are stored millions of files, is very hard. We had to hire a special employee, who categorized records in archive, but even such solvation was not perfect - we periodically received several thousands of records in a day, and a person who organized them, could not sort them all and made a lot of errors. All this unsorted music records collected, collected and collected... One day while real-time broadcasting music clips, prepared to transmission, were lost in all this chaos, and we were forced to break transmission. My colleague from another radio station called me, when knew about incident, and advised to use X-Organizer Music Organizer. Over several hours all our millions of MP3's were sorted and even if we are gathering several thousands of new audio records in some days, X-Organizer Music Organizer easily append them to common music base - right from audio CD's! Thanks very much to all X-Organizer Music Organizer developers. Program, that they made, really help people."

David Bronson, sound producer of radio-station "Voice of Colorado" Our mission

Today life is impossible to imagine without information, and information - without files. By reports, provided by independent researches, now more than 95% of information is stored in files.

In 1970's, when first floppy disk was invented, it had 0,1 Megabyte size and often hold up to 15 files. In 1980's was invented CD disk, that already had 500 Megabyte size and could hold already thousands of files. In 1990's became popular DVD disks, that could carry already dozens of thousands of files. Today most of files are stored on HDD (Hard Disk Drives), that are presented in every computer. They have size beginning from 80 000 Megabyte and hold millions of documents.

Several weeks ago was already started production of Hard disk with 470 000 Megabytes size, that is able to store already milliards of documents in variety of formats.

When on a computer are stored such variety of files, especially if they are packed in numerous of archives, it is extremely hard to navigate between them. People often don't know, what files and where are stored.

When in a folder several hundreds, or even thousands of files with names like "640info.txt", "important(12).doc", "mp312.rar", "confer64.avi", "d12.zip" it will be needed days, or even weeks and months to understand, what is what, rename all and move all in folders, according to content.

A whole directories are deleted, cause there is no possibility to find out, what is inside and use such content.

You are in the danger! Is any solvation of such heavy situation? Yes, and it is - X-Organizer Music Organizer.
